

# Vault Professional 5.1

Seamless bug tracking, version control and build integration.

### Upgrade from Visual SourceSafe

Vault's VSS Handoff gets you up and running in no time, with access to all of your VSS History, Shares and Pins. Jump right into the safer, faster, more-powerful world of Fortress, and leave nothing behind.

### World-Class Version Control

Based on **Vault Standard**, the version control found in **Vault Pro** gives you everything you need — reliability, atomic commits, excellent remote performance, flexible security, smart branching and merging, and more.

### Built-In Work Item Tracking

**Vault Pro** offers work item / bug tracking in your IDE or via your web browser. Work item tracking and version control are integrated, so you'll always know what work item a checkin relates to, and vice-versa. Customize the security to suit your team, create and save custom queries, and more.

### Axosoft OnTime Integration

If you are currently using Axosoft's **OnTime** for project management, **Vault Pro** now allows you access to OnTime defects within the standalone GUI.

### Build Integration

**Vault Pro** integrates with **CruiseControl.NET** to provide continuous integration and build support. We also provide **Ant** and **NAnt** tasks to access and update **Vault Pro** repositories from your build scripts, and a cross-platform command line client that can be called from any build tool.

### Full-Featured Integration with Popular IDEs

All of **Vault Pro**'s features are available in **Visual Studio** (including Visual Studio 2010) and **Eclipse**.

### Affordable

**Vault Pro** is affordably-priced on a per-user basis, with no server license fee, and discounts starting at 5-user licenses.

### Painless to install and manage

**Vault Pro** is a single-disc, or single-download install with modest prerequisites. And you won't need a dedicated admin or weeks of training to manage it.

**\$449/user**

**Volume discounts starting at 5 licenses**

**FREE for a single user**
